

BIO BEAR ROD GREASE

BIODEGRADABLE DRILL ROD LUBRICANT

Bio Bear Rod Grease is a blend of naturally sourced oil and non-toxic surfactants. It can be used to lubricate the outside of drill rods or as grease for slides on rod handlers.

Bio Bear Rod Grease used as an environmentally friendly alternative to common greases that contain heavy metal soaps known to bio-accumulate.

In field trials, **Bio Bear Rod Grease** has shown to have better wet rod adhesion than some heavy metal fibrous greases making it ideal for any rod grease application in any weather or condition.

Bio Bear satisfies the ASTM standard 7373 which is a measure of biodegradability over a 28 day period.

MIXING & HANDLING

Bio Bear Rod Grease can be applied like normal rod grease by hand swabbing it on. It is firmer in texture than traditional rod grease products and requires a bit of technique change for application but field trials have shown that when applied properly this product has superior performance to its competitors.

PHYSICAL & CHEMICAL PROPERTIES:

Appearance: Semi-solid tan paste

Specific Gravity: 1.1

Melting Point: >205°C

Boiling Point: >260°C

Packaging: 17kg pail
